Education**Cornell University**

Information Science

Ithaca, US

08/2022 – 05/2026

Core Courses: Data Structures & Algorithms, Object-Oriented Programming, Machine Learning, Natural Language Processing, Database Systems, Information Retrieval, Data Mining, UI/UX Design**New York University**

Data Science

NYC, US

09/2026 – Present

Skills**Technical Skills:** Java, Python, OCaml, Excel, SQL, HTML/CSS, R, Javascript, LangChain, C++, Node.js, Microsoft Office**Languages:** English(Fluent), Chinese(Fluent), French(Strong comprehension)

Internship/Research Experience**Cornell University Human-LLM Value Alignment Research Project****Ithaca, US**

Research Assistant to Professor Aditya Vashistha

05/2025 – Present

- Designed an experimental evaluation framework, drawing on ConvoKit's CRAFT model, to study how LLM-generated constructive comments influence the trajectory and rhetoric of online discussions.
- Conducted large-scale data analysis using R and SQL to assess LLM performance, examining how model-generated interventions can unintentionally homogenize cultural and ideological values expressed by human speakers.
- Co-authored *LLMs Homogenize Values in Constructive Arguments on Value-Laden Topics*, submitted to the 2026 ACM CHI Conference, demonstrating systematic value misalignment and cultural flattening in LLM-rewritten text.

Convooloo NLP Internship

Software Engineer

Remote (US)

06/2024 – 10/2024

- Engineered a scalable question-answering system leveraging the LangChain Retrieval-Augmented Generation framework and Google Gemini LLMs to translate natural language queries into SQL, achieving 95% accuracy on structured patient health datasets for basic information retrieval.
- Integrated and optimized MySQL and SQLite relational databases with AI inference pipelines, enabling dynamic, real-time data retrieval and query execution across heterogeneous data sources.
- Designed and implemented LangChain conversational retrieval chains combined with custom output templates to format SQL query generation and results into interpretable, human-readable responses, facilitating enhanced error detection and system debugging.

Xiaomi Data Analysis Internship

Data Analyst

Beijing, China

06/2024 – 08/2024

- Validated weekly product data for 5,000+ SKUs, ensuring accuracy in labels, costs, revenue, and inventory status. Developed 4 interactive Power BI dashboards featuring line charts, bar graphs, and heatmaps to monitor product lifecycle stages, regional sales performance, and inventory turnover, enabling strategic pricing and stock replenishment decisions.
- Optimized data processing workflows using SQL and Excel to track sales performance, cost fluctuations, and revenue trends across 6 regions, reducing report construction time by 30%.
- Maintained and updated enterprise databases by calculating new and projected financial metrics, supporting accurate forecasting and budgeting processes.

Hisense Transport Statistics Management Internship

Software Engineer/Data Analyst

Qingdao, China

06/2023 – 08/2023

- Developed and implemented debugging protocols for a traffic statistics tracking and classification system.
- Integrated Alibaba Sentinel to regulate user data requests, mitigating service overload and cascading failures.
- Collaborated with a cross-functional team to establish a peer-review system for auditing and refining system features.

Virtual Baidu Data Analysis Mentorship Program

Programmer/Data Analyst

Remote (China)

03/2023 – 05/2023

- Optimized machine learning models to predict online advertisement success rates using a dataset of 10,000+ website visits.
- Applied XGBoost, Random Forest, Logistic Regression, and Naïve Bayes models, achieving over 95% classification accuracy.
