

STELLA (JUANRU) ZHANG

(607) 280-8686 | stllazhn@gmail.com | [LinkedIn](#) | [GitHub](#)

EDUCATION

Cornell University - B.A. in Information Science, GPA: 3.97/4.00

Aug 2022 - May 2026

New York University - Incoming M.S. in Data Science

Fall 2026

RESEARCH & EXPERIENCE

Cornell University - Human-LLM Value Alignment Research

Ithaca, NY

Research Assistant to Prof. Aditya Vashistha

May 2025 - Present

- Designed an experimental framework based on ConvoKit CRAFT to test how LLM-generated constructive comments alter conversational trajectory, rhetoric, and value expression in online discussions.
- Analyzed human and LLM-rewritten comments across 9 models and 4 temperature settings using R, Python, SQL, Wilcoxon and Kruskal-Wallis tests, and Pareto-frontier analysis.
- Co-authored "[LLMs Homogenize Values in Constructive Arguments on Value-Laden Topics](#)," published at ACM CHI 2026, showing how LLM rewrites can homogenize values in contentious online discourse.

Convoloo

Remote, US

Software Engineering Intern - NLP

Jun 2024 - Oct 2024

- Built a LangChain and Google Gemini question-answering system that translated natural-language questions into SQL for structured patient-health datasets, reaching 95% accuracy on basic retrieval queries.
- Integrated MySQL and SQLite with AI inference pipelines and created conversational retrieval chains and inspectable output templates to improve debugging and error analysis.

Xiaomi

Beijing, China

Data Analyst Intern

Jun 2024 - Aug 2024

- Validated weekly product data for 5,000+ SKUs and built 4 Power BI dashboards tracking product lifecycles, regional sales, pricing, and inventory turnover.
- Streamlined SQL and Excel reporting across 6 regions, reducing report-construction time by 30% and supporting forecasting, budgeting, and replenishment decisions.

Hisense

Qingdao, China

Software Engineering / Data Analyst Intern

Jun 2023 - Aug 2023

- Developed test and debugging procedures for a transport-statistics system, integrated Alibaba Sentinel to regulate requests, and helped establish cross-functional peer review.

SELECTED PROJECT

E-Commerce Review Text Mining

GitHub

Independent Data Science Project

2026

- Built a reproducible R and Quarto pipeline for review-text analysis using TF-IDF, SVD, k-means clustering, logistic regression, and model evaluation to examine customer themes and recommendation behavior.

TECHNICAL SKILLS

Languages: Python, R, SQL, Java, OCaml, JavaScript, C++

Data & ML: pandas, tidyverse, text mining, clustering, classification, statistical testing, Power BI

AI & Backend: LangChain, Gemini, RAG, Django, MySQL, SQLite, PostgreSQL, Git, Quarto

Spoken Languages: English and Mandarin Chinese (fluent); French (strong reading comprehension)
